

ANDRÉS LAGE FREIRE

Responsible AI Architect · AI Governance Advisor · EU AI Act / ISO/IEC 42001

Madrid, Spain · Open to EMEA / Remote

+34 605 45 92 45 · andreslagefreire@gmail.com · github.com/tshapedconsultant · LinkedIn

EXECUTIVE SUMMARY

Responsible AI Architect and Strategic AI Governance Lead specialized in helping organizations transform AI initiatives from proof-of-concept into governed, auditable and scalable systems. Operating at the intersection of business, engineering, cybersecurity, legal and compliance functions, I establish AI Governance operating models, risk management frameworks and Responsible AI controls aligned with the EU AI Act, ISO/IEC 42001 and NIST AI RMF — translating regulatory obligations into executable controls, SDLC gates and continuous assurance.

SPECIALIZED IN

AI Governance	Responsible AI	Agentic AI Governance
EU AI Act Readiness	ISO/IEC 42001	AI Risk Management
AI Assurance	Enterprise AI Architecture	AI Lifecycle Governance

SELECTED AI GOVERNANCE PROJECTS

Enterprise AI Vendor Governance Console

github.com/tshapedconsultant/enterprise-ai-risk

STACK · V1.4.0

- Deterministic scoring · GDPR + EU AI Act + ISO/IEC 42001 + NIST AI RMF
- Jira human gates · hash-chained audit (Jira/Rekor/S3)
- FastAPI · Pytest · Docker · GitHub Actions CI

Outcome. Executable vendor governance: deterministic rules engine with HMAC-validated webhooks, external audit anchoring, and CI-deployed evidence packs.

Responsible AI Compliance Hub

github.com/tshapedconsultant/porto-seguro-compliance-hub

DATASET · 595K RECORDS

- EBM glass-box classifier · Polars ingestion
- KS drift gates · fairness audits (Art. 9, 14, 15)
- JSON evidence packs · Solvency II conformity
- FastAPI · Streamlit · Docker · SHA-256 artifacts

Outcome. Five-layer Responsible AI reference architecture mapping EU AI Act Articles 9–15 to executable controls; demonstration model achieved ROC-AUC 0.64.

AI Red Team Orchestrator

Azure-hosted GARAK framework for AI assurance and adversarial testing

FOCUS

- AI safety & red teaming
- GARAK + Azure OpenAI
- Governance validation

Outcome. Created reusable governance patterns to evaluate robustness and readiness before deployment.

Enterprise Data Analyst Agent

OpenAI-powered governed multi-agent architecture for enterprise reporting

FOCUS

- Agentic AI
- Human oversight
- Auditability
- Enterprise governance

Outcome. Demonstrated agentic systems designed with accountability, traceability and governance-by-design principles.

PROFESSIONAL EXPERIENCE

Strategic AI Consultant & Responsible AI Architect (Independent)

Jun 2021 – Present

International · Jun 2021 – Present

RESPONSIBLE AI GOVERNANCE & STRATEGY

- Created DGOM™, a Board-to-Code AI Governance Operating Model translating regulatory obligations, risk appetite and executive decisions into executable controls, SDLC gates, continuous assurance and auditable evidence.
- Established Human-in-the-Loop (HITL), escalation and dual-approval patterns for high-impact AI decisions; benchmarked governance models from Microsoft, Deloitte and BBVA.

APPLIED AI ARCHITECTURE & TECHNICAL LEADERSHIP

- Architected governed multi-agent AI prototypes using LangGraph, FastAPI and OpenAI API with governance-by-design principles.
- Designed governance-first ML pipelines integrating explainability, bias monitoring, drift detection and tamper-evident audit logging using PyTorch, TensorFlow and Scikit-learn.
- Designed AI deployment patterns across AWS Bedrock, Azure OpenAI and Databricks for scalable inference and analytics.
- Stakeholder Leadership. Acted as trusted advisor between engineering, compliance, cybersecurity, legal and executive stakeholders.

Cloud Implementation Specialist — Avaya Cloud Office

Oct 2020 – Jun 2021

Concentrix · Sofia, Bulgaria

- Led cloud deployment projects for multinational enterprise clients under strict security and compliance requirements.
- Acted as primary interface between technical delivery teams and executive stakeholders; streamlined rollout processes for multinational enterprise clients.

Innovation Project Lead (Award Winner)

2018

Repsol Foundation · 2018

- Led the team awarded the Repsol Foundation Entrepreneurship Prize.
- Applied Lean experimentation and business validation methodologies with corporate partners.

EDUCATION & EXECUTIVE SPECIALIZATION

Self-directed AI Governance & AI Systems Curriculum (2025–Present) — Independently designed interdisciplinary learning programme spanning AI governance, agentic AI, ML/MLOps, cybersecurity, privacy, AI strategy and responsible AI, continuously updated through comparative research, cross-validation across sources, and hands-on implementation.

CORE COMPETENCIES

AI GOVERNANCE & RISK	AGENTIC AI & LLM ENGINEERING	ML/DL ENGINEERING
• EU AI Act • ISO/IEC 42001 • NIST AI RMF • AI Risk Assessment • Human-in-the-Loop Governance • AI Assurance • AI Red Teaming	• Multi-Agent Systems • LangGraph • LangChain • RAG Architectures • OpenAI API • Azure OpenAI • GARAK	• PyTorch • TensorFlow • Scikit-learn • Model Deployment • FastAPI • Monitoring & Validation
CLOUD, DATA & MLOPS	SECURITY, TRUST & COMPLIANCE	LEADERSHIP
• Python • SQL • Docker • Kubernetes • AWS Bedrock • Databricks • Azure AI Services	• GDPR • AI Compliance • Explainability (SHAP, LIME) • Prompt Injection Defense • Vendor Risk • Tamper-evident Audit	• Executive Communication • Stakeholder Alignment • Strategic Advisory • AI Lifecycle Transformation
